

HAYER & BOECKER

DIE MASCHINENFABRIK

GET YOUR PACKAGING MACHINE IN SHAPE FOR TODAY'S CHALLENGES

Can you be sure everything is always running smoothly? Or could your machine use a „check-up“? Your packaging machine is a valuable asset – regular maintenance makes absolute sense. Especially with respect to the current challenges of rising energy costs and the foreseeable wear and spare parts availability delays.

Take proactive precautions!

Our service experts will take a close look at your packaging machine during an on-site visit. First we look at the packing process to see if everything is running smoothly and then we look deeply into the technology. If something catches our eye, we act immediately! Your result after our service visit:

Your machine is optimally adjusted in terms of energy - for maximum performance

Our service experts, for example, adjust the pneumatic components on your machine. This ensures optimum use of energy. Processes are put perfectly back in sync. The packing process runs stably and cleanly again. Resources and operating materials are used efficiently and with high performance.

Possible defects are detected and eliminated – for the best possible machine availability

With our preventive maintenance, our service experts uncover possible „weak points“: could a dormant defect sooner or later cause your packaging machine to fail? Where are traces of wear already visible? Which components should be replaced as soon as possible? Next we overhaul your machine – of course always in consultation with you.

Your spare parts stock is ideally and economically replenished – for comprehensive delivery capability

Do you have all the crucial original wear and spare parts in stock? Keep in mind that currently the delivery time can be significantly longer than usual. Even though we have stocked up on many common parts and can deliver at short notice in most cases as usual, we are still dependent on the world market. Prepare for this early on and adjust your spare parts stock!

P.S. Would you like to benefit from our excellent service over the long term and at the same time take advantage of the most favorable conditions? Consider a service contract with us! This would mean us being continuously and reliably at your side, at an agreed frequency over an agreed duration which suits your individual requirements.

Safe is safe.

In addition to maintenance and spare parts, we offer a wide range of other services.

Together for safe conditions in your production.

With safety engineering + explosion protection.

With you we'll evaluate the status quo with you, develop all necessary security standards based on legal requirements and implement them together.

Remember to calibrate your machine!

Is a legally required regular recalibration of your weighing unit imminent? In preparation, we service your system, make it fit for calibration and, if desired, even accompany the entire calibration verification process. So that you don't experience any unpleasant surprises.

Does your packaging machine need a software update?

Is your weighing electronics MEC III or MEC 4.0 up to date regarding current software status? Ensure better control and easier operation.

Protect your staff!

Make sure that your employees are sufficiently protected from noise. With a sound measurement we will find out for you. The result provides you with insights with which you can derive suitable sound insulation measures.
